EDUCATION

Tsinghua University September 2022 – Expected 2027
Xinya College & Department of Computer Science and Technology
GPA: 3.6/4.0
Selected coursework: Complex Analysis (A+), Media Computing (A+), Database Special Topic Training (A+), Introduction to Artificial Intelligence, Introduction to Machine Learning, Fundamentals of Computer Graphics.

MANUSCRIPTS

"Curriculum Multi-Reward Reinforcement Learning for Customized Text-to-Image Generation"
Yuwei Zhou, Xin Wang, Hong Chen, Yipeng Zhang, ***Qingyang Zhou****, Wenwu Zhu*
Manuscript OpenReview Paper PDF

"Towards Mutually Illuminative Collaborative Human–AI Deliberate Discussion"
Zipeng Zhang, Shiwei Wu, Ran Ran, ***Qingyang Zhou****, Ranrui Ma, Jiaye Leng, Jian Zeng, Zhenhui, Chun Yu*
Manuscript Paper PDF

RESEARCH EXPERIENCE

Research Intern, Information Retrieval Lab October 2024 – July 2025
Tsinghua University Information Retrieval Lab

- Surveyed recommendation-model literature and reproduced open-source models (primarily FM and DeepFM), studying their implementations.
- Integrated an existing sparse autoencoder (SAE) plug-in into the codebase and ran preliminary experiments under a senior student's guidance.

Research Intern, Pervasive Human-Computer Interaction Lab January 2025 – May 2025
Tsinghua University Pervasive Human-Computer Interaction Laboratory

- Surveyed and presented literature on aligning human and AI thought processes; contributed to group discussions on the research direction.
- Implemented part of the core logic for a human–AI interactive writing assistant that supports collaborative idea generation.
- Co-authored "Towards Mutually Illuminative Collaborative Human–AI Deliberate Discussion" (see Manuscripts).

Research Intern, Multimedia and Network Big Data Lab July 2023 – July 2024
Tsinghua University Multimedia and Network Big Data Lab

- For the project "Video Generation System Combining LLMs with Diffusion Models," reproduced experiments from multimodal LLM papers and presented results at group meetings.
- Assisted senior students in debugging experimental code; studied diffusion models and personalized image generation.
- Co-authored "Curriculum Multi-Reward Reinforcement Learning for Customized Text-to-Image Generation" (see Manuscripts).

INDUSTRY EXPERIENCE

Client Development Engineer Intern, Tencent (Project MAX) May 2026 – August 2026
Tencent, Project MAX Team

- Diagnosed and fixed NavMesh movement issues in battle, including terrain stutter and corner sticking; corrected dash destinations outside the map while preserving valid paths through obstacles.
- Wrote a Scene-view debugging script that visualizes NavMesh targets, joystick direction, and recent movement trajectories, with automatic stuck detection.
- Built an in-battle GM panel for FPS, performance, version, and time overlays, and developed UI for captain selection and main-city interactions; documented the NavMesh baking workflow.

SELECTED PROJECTS

Path Tracing Renderer [Source code] June 2026

Computer Graphics Course Project

- Built a C++ renderer supporting Whitted-style ray tracing, Monte Carlo path tracing, and unbiased Russian roulette termination.
- Implemented PBR shading with GGX importance sampling (isotropic/anisotropic), Cook–Torrance BRDF, Fresnel–Schlick, and OBJ UV texture mapping for diffuse, mirror, glass, and glossy materials.
- Added BVH acceleration for 100k+ face meshes, NEE + MIS with power heuristic, area/point/directional/spot lighting, depth of field, MSAA, gamma correction, and OpenMP row-parallel rendering with thread-local random sequences.

Five-Stage Pipeline CPU [Source code] November 2025 – December 2025

Computer Organization Course Project

- Implemented a five-stage pipelined RISC-V CPU in SystemVerilog covering 19 basic instructions plus extensions, with data forwarding, control-signal generation, and hazard handling; validated through Vivado simulation.

Connect Four AI [Source code] June 2024

Course Project

- Developed a Connect Four AI in Python using Monte Carlo Tree Search (MCTS) with Upper Confidence bounds applied to Trees (UCT), achieving a win rate above 90% against baseline AI opponents.

Text Sentiment Analysis Model [Source code] May 2024

Course Project

- Implemented and compared CNN, RNN, and MLP text sentiment classifiers in PyTorch on a course-provided dataset, achieving over 90% accuracy.

Intelligent Agent-Based Game "Generals" September 2023 – May 2024

Major Project in the 28th Tsinghua University Intelligent Agent Competition

- Lead developer of a turn-based strategy game for the competition, available at saiblo.net/game/35.
- Responsible for backend logic, unit testing, debugging, SDK development, and documentation; supported participants throughout the competition.

TEACHING AND SERVICE

Volunteer Teaching Assistant (Programming and Algorithms) September 2025 – Present

Tsinghua University, Center for Student Learning and Development

- Provide drop-in tutoring in C/C++, data structures, and algorithms, covering debugging, algorithm design, and core concepts.

Secretary, Intelligent Agent Department February 2023 – Present

Tsinghua Student Science and Technology Association

- Participate in game development and event organization for the Tsinghua Intelligent Agent Competition; led development of "Generals" for the 28th edition (see Projects).

Tutor, Tsinghua University Science and Engineering Summer Camp July 2024 – August 2024

2024 Science and Engineering Summer Camp, I6 Class Tutor

- Provided technical guidance and mentored teams in intelligent robot design and cardboard-bridge construction.

SKILLS

Languages	Chinese (native), English (TOEFL 108), Spanish (basic)
Programming	Python, C/C++, C#, SystemVerilog, Java, JavaScript/TypeScript, Rust
AI/Machine Learning	PyTorch, NumPy, fundamentals of machine learning and deep learning
Graphics/Game Development	OpenGL, Unity, path tracing, rendering pipelines
Tools	Git, Linux, Docker, LaTeX, Markdown
